Three analytical levels, three evidential claims

1 Sequence labels

EVIDENCE
Deposited sequence files and source annotations

EXAMPLES IN THIS REVIEW
F665: 665 negative identities
Seven opposite-label identities
Exact milk-reference matches

INTERPRETATION
Which contrast is represented by the training labels?

2 Evaluation

EVIDENCE
Released partition files and inspected code paths

EXAMPLES IN THIS REVIEW
One 532/133 split in 7 versions
A2 to A9 role changes
A4/B1 selection decisions

INTERPRETATION
What comparison does the reported score measure?

3 Food experiments

EVIDENCE
Published assays, peptide measurements and controls

EXAMPLES IN THIS REVIEW
Candidate assays and potency
Digestion products
Matched food matrices

INTERPRETATION
What response is established for the specified food use?

The three levels are analytical distinctions: a result at one level does not substitute for, or erase, a separately observed result at another.
