
A3/A5 omitted only from display: same negatives as H1; all 17 retrievable versions were calculated.
* H4 = train 532; A7 = repository 5,250 (paper mapping unresolved); A12 = available null 200; H6 = complete 629.
B1 combines benchmark 661 + external 5. 0 = observed no exact overlap for displayed sets; diagonal omitted.
Unknown full-model relations are not zero. A7 author-documented X padding removed; same sequence need not imply same source or assay.
